WHAT IS COMMUNICATOR GO?

Your office phone system, in your pocket.

Communicator GO extends your Bluehubcloud phone system to iOS and Android, so your team can work from anywhere without missing a beat. Make and take business calls, message colleagues, share files, join conferences and send SMS — all from one secure, easy-to-use app, with your business number, not your personal one.

Work from anywhere

Take your business calls on the road, at home, or between sites — without being tied to a desk phone.

One unified workspace

Calls, chat, SMS, conferencing and your team directory — all in a single app, synced with your desktop.

Always in sync

Call history, contacts and presence stay consistent across mobile and desktop, so nothing falls through the cracks.

Built for business

Secure, professional and reliable — designed for teams who run on phone calls and need them handled right.

Available on iOS & Android

Communicator GO is free to download from the App Store and Google Play. Sign in with your Bluehubcloud account — or scan a QR code — and you're ready to go in seconds.

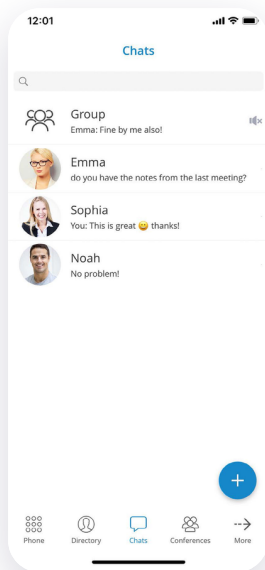

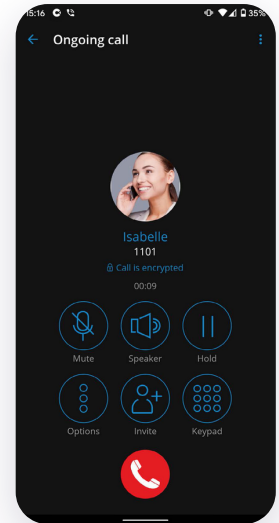

ESSENTIAL FEATURES

Everything your team needs to stay connected.

CALL CONTROL

Handle every call with confidence

The full suite of call handling, right from your phone — click to call, mute, hold, transfer and voicemail. Manage live calls as easily as you would at your desk, wherever you are.

TEAM CHAT MESSAGING

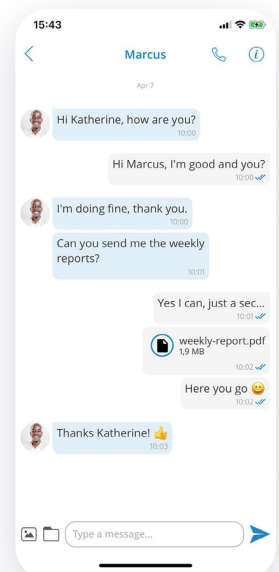

Keep the whole team in sync

An intuitive way to handle daily workplace communication — file transfers, pinned messages and priority organisation keep your essential information at your fingertips, with no more endless scrolling to find that one file.

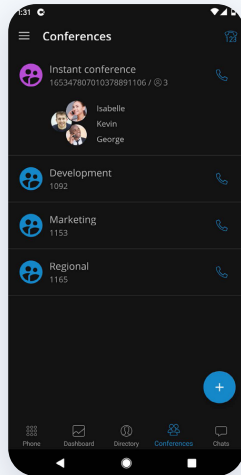

SMS & MMS

Text from your business number

Send and receive SMS and MMS to colleagues or customers, with conversations synced inside the app. Add new contacts to your phonebook in a tap and stay in the flow of work.

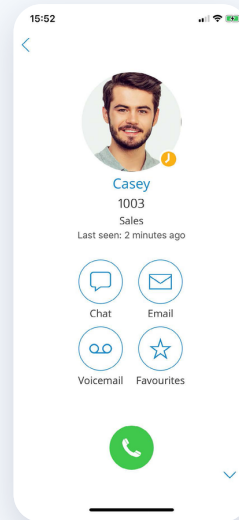

Designed for the way you actually work.

Conferencing

Join static and dynamic conferences, see who's on the call, and invite or manage participants with mute and remove controls.

Presence

Show your availability so colleagues know when you're free or heads-down — synced across mobile and desktop automatically.

- **Easy QR-Based Login**

Scan a QR code sent to your email and you're logged in instantly — no typing credentials.

- **2-Factor Authentication**

Add an extra layer of security to every account with simple, built-in 2FA.

- **PBX Directory**

Look up every extension, set nicknames, and hide or block the ones you don't need.

- **Message Reactions**

React instantly to messages and announcements without typing a reply.

- **GSM Callback**

Patchy internet mid-call? Redial over the GSM network so your call stays connected.

- **SIP Over Mobile Network**

Choose whether the app uses mobile data for calls — handy for avoiding roaming charges abroad.

- **Efficient File Sharing**

Send files and images in-app, all in one place. Downloads auto-clear after two weeks to save space.

- **Light, Dark & System Themes**

Switch between light and dark, or follow your device theme — easy on the eyes, day or night.

bluehubcloud

Take your business communications anywhere.

Communicator GO puts your entire Bluehubcloud phone system in your pocket — calls, chat, SMS, presence and conferencing, all in one app. Free to download, easy to set up, and backed by real Australian support.
